Abstract

PURPOSE: To obtain the title composition having beautiful appearance, refreshing touch and excellent feeling in use free from greasiness, without using a surfactant providing skin stimulation, by dispersing a specific silicone composition into an aqueous phase containing a specific thickening agent in spherule state.

CONSTITUTION: A silicone composition consisting of an organopolysiloxane resin such as high-viscosity silicone having ≥ 100 cps viscosity, silicone compound or partially crosslinked type organopolysiloxane resin and a low-viscosity silicone oil is dispersed into an aqueous phase containing a crosslinked type polyacrylic thickening agent in an amount to make viscosity of the aqueous phase 6,000-200,000 cs in a spherule state. Particle diameter of oil phase of the composition is readily controlled, the oil phase is uniformly dispersed into the aqueous phase stably for a long period, the composition shows beautiful appearance for a long period of time, usable as a water-repellent cosmetic by itself, also as a cosmetic base for a wide range and can be blended with various cosmetic components depending upon cosmetic purposes.
